## Continuation of 13. Other:

Applicant's remarks regarding the drawing objection and that no correction is necessary have been considered and have not been found to be persuasive. In particular, the drawing objection was that all variations of the same name part failed to utilize different reference numerals as required by 37 CFR 1.84(p)(4) and MPEP 608.01(g). Applicant's remarks appear to be comparing two different parts having two different reference numerals and have no relevance to the objection made by the examiner. The examiner named but one example (though many others exist) and that example was with respect to the shoulder identified by "7D". Fig. 3 shows "shoulder 7D" to be a thin beveled part that stops short of and does not engage threading 9D. Fig. 5 shows "shoulder 7D" to be a thick part with teeth 7F that engages teeth 9G on the inner ring. Thus, it is quite evident that two variations of the shoulder are shown and therefore different reference numerals must be used to identify each of these variations. Note also the different inner rings 9 (Figs. 3, 5 and 6), housing 7 (Figs. 3 and 5), etc. Note also the use of reference numeral "14" in Figs. 5 and 6 to identify the "rotational link" that is constituted by the complementary teeth 7F and 9G in Fig. 5 and a plate 16 in Fig. 6. Correction of the drawings (and the specification so that it fully corresponds to whatever changes are made in the drawings) remains required.
